

1. Confirm password
2. Show password when creating it

## General:

- We want emphasis on great user experience so the first users will feel like this only solves pains and doesn't add any new ones :)
- We want to be able to track the virality/network effect
- Gifting options:
  - Can **we** collect money and then send to the customers preferred payment platform (Venmo/Zelle) - called "platform facilitator".

I asked chatgpt about our options: [Link](#)

- Collect the money ourselves and enable only
  - Gift cards
  - Gift purchase

Consider using white label virtual cards (Payem - Yarden, <https://www.theleeway.com/products>)

## GTM strategies

- Show how many people watching/RSVPS etc
- Give gift if you sign up from the link.
- Influencers in the child/parenting space
- Offer \$ if you sign up towards the first gift?
- Referral incentive

## Page Overview

### 1. Home Page/landing page (**app/page.tsx**)

[https://v0.dev/chat/XsUoizkHo6O?b=b\\_i4wXYkfSlaa](https://v0.dev/chat/XsUoizkHo6O?b=b_i4wXYkfSlaa)

Mockup -  Landing page - Phase 1

#### Functionalities:

- Displays the main landing page introducing the app.

- Highlights features and benefits of using Arrgift.
- Shows a section featuring the latest blog posts.

**Links to:**

- **Sign Up** page
  - **Sign In** page
  - **Blog** page
  - **Individual Blog Posts**
  - **Contact** page
  - **Legal** (Terms of Service, Privacy Policy)
  - **About Us**
- 

## 2. Sign Up Page (**app/signup/page.tsx**)

**Functionalities:**

- User registration form to collect:
  - First Name
  - Last Name
  - Email (with email check)
  - **Confirm Email - Best practice**
  - Password (Hidden and show button)
  - Confirm Password (Hidden and show button)
  - Phone number (**Required**)
  - **Phone confirmation - Best practice**
  - Delivery Address (Google auto-fill to verify it's correct)
  - Upload image (Optional)
  - I agree to the terms and conditions - **Add link to terms and condition**
  - Children **Birthday** Information (Optional)
    - Name
    - Gender (Optional)
    - DOB (mm/dd/yy)
    - Add another
    - Interests
- Handles form submission and user creation.

**Links to:**

- **Dashboard page** - Once clicked Create Account
-

### 3. Sign In Page ([app/signin/page.tsx](#))

#### Functionalities:

- User login form for authenticating credentials.

#### Links to:

- **Sign Up** page
  - **Forgot Password** [page](#) (10. Reset Password Page)
- 

### 4. Dashboard Page ([app/dashboard/page.tsx](#))

#### Functionalities:

- Top Banner
  - Left the wrappit logo - links to the landing page
  - Remove Blog and Contact + quick link button (Upcoming birthday participating)
  - Avatar image clickable :
    - Dashboard
    - Create birthday
    - **Edit profile ([page](#))**
      - **Displays user profile information that was added in signup page**
        - Personal information
        - Change password ([page](#))
        - Kids information
        - **Need to add Profile page**
    - Past birthday participated (Page)
    - Logout
- Create a box of upcoming birthdays participate in
  - Event name
  - Date
  - Clickable to invitee page
- Provides details on:
  - Current birthday event (Host)
    - Display Birthday information
      - Subject (Name of Kid)
      - Address provided
      - And Date
    - Collection pledge Status

- Who gave and how much
  - RSVP Status
    - Kid Name
    - Parent Name
    - Yes/No/Maybe
    - Phone number
    - Dietary requirement
  - Buttons
    - Edit invitation
    - View invitee version
    - Copy link to invite
  - Textbox:
    - Send reminder to whoever registered
      - Textbox with pre-suggested wording (uneditable)
    - A textbox with suggested text to share for invitation message
      - Textbox with pre-suggested wording (uneditable)
- **Upcoming birthdays I am hosting** (next 90 days) + button to Create invite
  - Display kids name and date automatically - 90 days mark
  - Send reminder 30 days before bday to send invite
- Past Birthdays
  - Day after current event moves to Past birthdays section
  - Kids bday and how much collected
  - Button to send Thank you note
  - Add quick link to data "participated in"

#### Links to:

- **Create Birthday** page
- **Edit Birthday** page
- **Invitation Preview** page
- **Thank You Note** pages (for past birthdays)

## 5. Create Birthday Page ([app/create-birthday/page.tsx](#))

#### Functionalities:

- **Form** to create a new birthday event.
  - Birthday person's name
  - Gender (optional) - for tailoring AI
  - Birthday party date
  - Birthday party Time (to use for "add to calendar")
  - Location of Party (becomes a link to navigation app)
  - Description box (Optional)

- Link to the payment link/instruction
  - Add free text box for each of the following option
    - Venmo - add link with explanation how to add link
    - Zelle
    - Paypal
    - CashApp
    - Other
    - Add other button
    -
- Gift Display
  - Add a link
  - Description
  - Upload a picture
- Charity Link for access money
  - Option to write why you chose this charity
- **Invitation Design**
  - **AI-powered** invitation **design** tool.
    - Add picture
    - Textbox for prompt
    - Shows preview of invite image created
    - Retry prompt with text
  - Upload pre-designed image for the invitation.
- Suggested text to send to parents (come up with a convincing fun reason why we are this is the new way of gifting)
- Save button
- Preview invitation:
  - If possible make it live update based on the information the organiser inputs above.
  - If not, remove and add a preview invitation button.

This page should auto-save the information in case someone exits in the middle

- Language of convincing people to gift and log-in.

**Links to:**

- **Dashboard** page
- **Invitation Preview** page

## 6. Edit Birthday Page (**app/edit-birthday/[name]/page.tsx**)

**Functionalities:**

- Form to edit an existing birthday event.

- Includes all features from the **Create Birthday** page.

**Links to:**

- **Dashboard** page
  - **Invitation Preview** page
- 

## 7. Invitation Page (**app/invitation/[name]/page.tsx**)

**Functionalities:**

**3 progress step**

1. **Invitation + RSVP & details**
2. **Amount and message**
3. **Display link to gift contribution**

### **Invitation + RSVP & details**

- Displays birthday invitation details.
  - All relevant information that was filled in the creation page
  - Links to "Add to Calendar" - prompt invitees to add to calendar
    - Take date, time, location and link to invite in the details.
- Handles RSVP submissions (Mandatory)
  - Yes/No/Maybe
  - Name of Invitee
  - Parents Name - Option to add another contact person/parent
  - Parents Email
  - Parent Phone
    - Explanation of why we are collecting this information (Emergency and updates)
  - Dietary requirements
- Button "Next"

### **Amount and message**

- Shows gift contribution options.
  - Display the gift
  - Would you like to contribute towards the gift?
    - Yes - Open Box to mention amount and explain links will appear in the next step
    - No thank you (or other text)

- Short explanation of the charity for excess money (if relevant)
- Allow guests to leave notes (Options)
  - Textbox
  - Ask AI to help rewrite (when pressed will rewrite the text)
- Add a textbox asking how much was gifted via payment link (mandatory)
  - Box to input amount
  - Allow invitee to select "other"
- Button "Next"

### **Display link to gift contribution**

**If in previous section invitee selected to contribute show this:**

- Thank you for RSVPing + looking forward to seeing you!
- Mention how much was committed (in step 2) and let them know the organiser has been notified.
- Display links to the user selected providers (Zelle, VEnmo etc)
- Sign-up prompt - Would you like to add your kids birthdays for reminders?
  - Link to the signup page
- "Already have an account?" - sign in and add to your dashboard.
- Add a "complete" button

**If in previous section invitee selected NOT to contribute show this:**

Thank you for RSVPing + looking forward to seeing you! message looing

- Popup box after submitting - Would you like to add your kids birthdays for reminders?
  - No spamming or promotions will be sent
  - "Already have an account?" - sign in and add to your dashboard.
  - Checkbox to OK we will use the contact information to send reminders
  - Send one email to mention we have
- Sign-up prompt - Would you like to add your kids birthdays for reminders?
  - Link to the signup page
- "Already have an account?" - sign in and add to your dashboard.
- Add a button "**complete**"

**Links to:**

- Gift contribution page (external link)
- Add to Calendar link (external link)
- Link to Navigation app ((external link))

---

## 8. Thank You Note Page creator (`app/thank-you-note/[name]/page.tsx`)

### Functionalities:

- Subject - textbox should be pre-populated with "Thank you - From #birthday name#" - but editable
- Allows users to create and edit thank you notes.
  - Offers AI-suggested text generation.
- Ability to upload video/Image

**Problem:** Videos and image will be usually on the phone but we are building the MVP for Desktop.

How can the user easily upload the image/video to the thank you page?

### Suggested solutions:

Have a send link to upload button that will send a message (email or txt) that will open on the phone that will enable an upload.

Have a whatsapp number that a user can send the file to and we will allocate it. (how will it go to the right thankyou page?)

Add instructions on how to get it on your laptop (Apple/Andriod/Google)

Add a signup button and text to prompt on the invitee version

### Links to:

- Dashboard page
- 

---

## 9. Forgot Password Page (`app/forgot-password/page.tsx`)

### Functionalities:

- Form to request a password reset.
- Sends reset password email.

### Links to:

- Sign In page
-

## 10. Reset Password Page ([app/reset-password/\[token\]/page.tsx](#))

### Functionalities:

- Form to set a new password using a reset token.

### Links to:

- **Sign In** page (after successful reset)
- 

## 11. Change Password Page ([app/change-password/page.tsx](#))

### Functionalities:

- Form for logged-in users to change their password.

### Links to:

- **Dashboard** page
- 

## 12. Blog Page ([app/blog/page.tsx](#))

### Functionalities:

- Displays a list of blog posts.
- Enable easy adding of new blog posts

### Links to:

- **Individual Blog Post** pages
- 

## 13. Contact Page ([app/contact/page.tsx](#))

### Functionalities:

- Contact form for users to send messages.
- Have an organised way to receive the forms (open a dedicated email)

### Links to:

- Home page
- 

#### 14. Terms of Service Page ([app/terms/page.tsx](#))

##### Functionalities:

- Displays the terms of service.

##### Links to:

- Home page
- 

#### 15. Privacy Policy Page ([app/privacy/page.tsx](#))

##### Functionalities:

- Displays the privacy policy.

##### Links to:

- Home page

#### 16. Profile Page ([app/Profile.tsx](#))

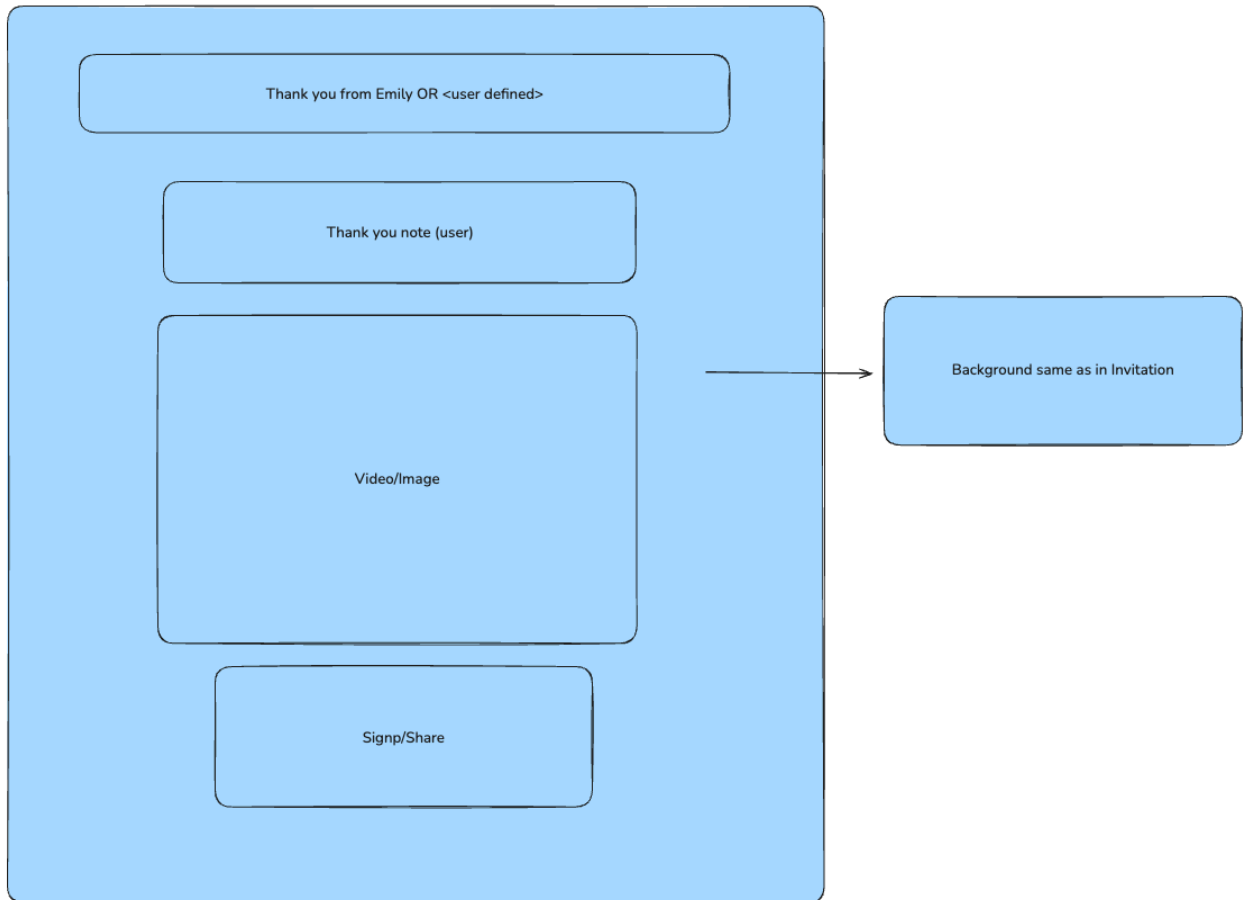

##### Functionalities:

- Displays user profile information that was added in signup page
  - Personal information
  - Change password ([page](#))
  - Change Email?
  - Kids information
- Save button
- Cancel Button

##### Links to:

- Dashboard page (after save or cancel)

#### 17. Thank You Note Page invitee ([app/thank-you-note/\[name\]/page.tsx](#))

### Functionalities:

- Subject - textbox
- Thank you note text box.
- Video/Image - if added should appear, if not
- Sign up button and propt text to do that.
- Share button - copy the URL functionality
- Commenting functionality - V1.5?
- What about adding an emoji?

### Links to:

- **Dashboard** page
- 

---

## Summary

This structure provides an intuitive flow for navigating the wrappit web app. Users can easily transition between critical functionalities like creating events, managing invites, and accessing auxiliary features such as blogs and contact forms. Each page is interconnected, creating a seamless user experience.

## Product Requirements Document: wrappit Web App

### ## 1. Product Overview

wrappit is an innovative web application designed to revolutionize birthday celebrations by making them more meaningful, sustainable, and hassle-free. The platform allows users to organize birthday events, manage invitations, collect funds for group gifts, and promote eco-friendly celebration practices.

### ## 2. Target Audience

- Primary: Adults (25-45) who organize birthday celebrations for themselves, friends, or family members
- Secondary: Environmentally conscious individuals looking for sustainable gifting options

### ## 3. Key Features

#### #### 3.1 User Authentication and Management

- User registration and login functionality
- Password management (change password, forgot password)
- User profile management

#### #### 3.2 Birthday Event Creation and Management

- Create and edit birthday events
- AI-powered invitation design tool
- RSVP management
- Event dashboard for organizers

#### #### 3.3 Gift Fund Collection

- Integrated payment system for group gifting
- Fund progress tracking
- Option to redirect excess funds to charity

#### #### 3.4 Eco-Friendly Gifting

- Curated list of sustainable gift options
- Integration with eco-friendly product providers

### ### 3.5 Invitation System

- Customizable digital invitations
- Shareable invitation links
- Option to upload custom invitation designs

### ### 3.6 Thank You Notes

- Automated thank you note generation
- Customizable thank you messages
- Option to include photos or videos in thank you notes

### ### 3.7 Analytics and Reporting

- Event statistics (attendance, gift contributions, etc.)
- User engagement metrics

## ## 4. Technical Requirements

### ### 4.1 Frontend

- Framework: Next.js (App Router)
- UI Library: React
- Styling: Tailwind CSS
- State Management: React Hooks
- Form Handling: React Hook Form

### ### 4.2 Backend

- Runtime: Node.js
- Framework: Next.js API Routes
- Database: PostgreSQL
- ORM: Prisma
- Authentication: NextAuth.js

### ### 4.3 APIs and Integrations

- Payment Gateway (e.g., Stripe)
- Email Service (e.g., SendGrid)
- AI Image Generation API (for invitation designs)

### ### 4.4 Deployment and Hosting

- Platform: Vercel
- CI/CD: GitHub Actions

### ### 4.5 Security

- HTTPS encryption
- Secure authentication practices
- Data encryption at rest and in transit

## ## 5. User Stories

1. As a user, I want to create an account so that I can start organizing birthday events.
2. As an event organizer, I want to create a birthday event and customize the invitation using AI-generated designs.
3. As an invitee, I want to RSVP to an event and contribute to a group gift easily.
4. As an event organizer, I want to track RSVPs and gift contributions in real-time.
5. As a user, I want to change my password or reset it if forgotten.
6. As an event organizer, I want to send personalized thank you notes to attendees and gift contributors.

## ## 6. Non-Functional Requirements

- Performance: The application should load within 3 seconds on average internet connections.
- Scalability: The system should be able to handle at least 10,000 concurrent users.
- Accessibility: The application should be WCAG 2.1 AA compliant.
- Responsiveness: The UI should be fully responsive and work well on mobile devices.

## ## 7. Future Enhancements

- Integration with calendar applications (Google Calendar, Apple Calendar)
- Social media sharing capabilities
- Multi-language support
- Mobile app versions (iOS and Android)

## ## 8. Success Metrics

- User acquisition rate
- User retention rate
- Number of events created per month
- Average gift contribution per event
- User satisfaction score (based on post-event surveys)

## ## 9. Timeline

- Phase 1 (MVP): Core features including user authentication, event creation, and basic gift collection - 2 months
- Phase 2: AI-powered invitation design, enhanced gift options, and thank you notes - 2 months
- Phase 3: Analytics, reporting, and additional integrations - 1 month

## ## 10. Risks and Mitigations

- Risk: Low user adoption  
Mitigation: Implement a robust marketing strategy and offer incentives for early adopters

- Risk: Payment processing issues

Mitigation: Thoroughly test payment integrations and have a backup payment provider

- Risk: Data privacy concerns

Mitigation: Implement strict data protection measures and be transparent about data usage policies

...

This PRD provides a comprehensive overview of the wrappit web app, including its features, technical requirements, and development roadmap. It should give developers a clear understanding of the project's scope and requirements. The document is structured to be easily readable and covers all major aspects of the application.

Remember to review and adjust this PRD as needed based on any additional features or changes you might want to implement. It's also a good practice to involve the development team in refining the technical requirements and timeline estimates.
